LITTLE WONDERS ESL

Biology Word Lab: Animal adaptations

Level B1 · about 25 minutes · surviving in a habitat

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. I am an animal with wide feet and a hump of fat. I can live in a hot desert.
2. I am a plant with thick stems that store water. I have spines instead of leaves.
3. Many birds do this in winter. They fly to a warmer place and then come back.

2 COOL FACT: BUILT FOR SURVIVAL

An **adaptation** is a special feature that helps a living thing survive in its **habitat**. A **camel** has wide feet for walking on sand, long eyelashes to keep sand out of its eyes, and a hump that stores fat. A **polar bear** has thick fur and a layer of fat to stay warm in the Arctic. A **cactus** has thick stems that store water, and sharp spines instead of leaves. Many birds **migrate**, which means that they travel to a warmer place for the winter.

feature = a special part or quality

eyelashes = the small hairs on your eyelids

survive = to stay alive

spines = sharp points on a plant

WORD BANK

- ☐ camel
- ☐ cactus
- ☐ migrate
- ☐ habitat
- ☐ fur
- ☐ fat
- ☐ sand
- ☐ spines

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. What is an adaptation?
2. How does a polar bear stay warm?
3. Why do some birds migrate?
