LITTLE WONDERS ESL

Biology Word Lab: Photosynthesis

Level B1 · about 25 minutes · how plants make food

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. We are the flat green parts of a plant. We take in air and sunlight.
2. I am the green substance in plants. I catch energy from sunlight.
3. Plants release me into the air. People and animals need me to breathe.

2 COOL FACT: FOOD FROM SUNLIGHT

Plants make their own food. This process is called **photosynthesis**. The **leaves** take in carbon dioxide from the air through tiny holes. The **roots** take in water from the soil. **Chlorophyll**, the green substance in leaves, captures energy from sunlight. The plant uses this energy to change carbon dioxide and water into **sugar**. It also releases **oxygen**, which we need to breathe.

process = a series of steps that happen

captures = catches

releases = lets something go out

substance = a kind of material

WORD BANK

- ☐ **leaves**
- ☐ **chlorophyll**
- ☐ **oxygen**
- ☐ **roots**
- ☐ **water**
- ☐ **soil**
- ☐ **sugar**
- ☐ **plant**

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. What is photosynthesis?
2. What do the roots take in?
3. What do plants release?
