LITTLE WONDERS ESL

Biology Word Lab: The human skeleton

Level A2 · about 25 minutes · bones, joints and muscles

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. I am the bone that protects your brain. I am the hard part of your head.
2. I am your backbone. I am made of many small bones.
3. I am a place where two bones meet. Your knee and your elbow are examples of me.

2 COOL FACT: WHY DO WE HAVE BONES?

An adult human **skeleton** has 206 bones. The skeleton holds up your body, protects soft organs and works with muscles to help you move. The **skull** protects the brain. The **ribs** make a cage around the heart and the lungs. The **spine**, or backbone, is made of small bones called vertebrae. The longest bone in the body is the **femur** in your thigh. **Joints**, such as the knee and the elbow, are places where two bones meet.

organs = parts of the body, such as the heart

protects = keeps safe

thigh = the top part of your leg

cage = a space with bars around it

WORD BANK

- ☐ skull
- ☐ spine
- ☐ joint
- ☐ bones
- ☐ ribs
- ☐ femur
- ☐ knee
- ☐ brain

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. How many bones does an adult have?
2. What does the skull protect?
3. Where is the femur?
