LITTLE WONDERS ESL

Chemistry Word Lab: Chemical reactions

Level B1 · about 25 minutes · when substances change

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. I am a change that makes new substances. Burning wood is an example of me.
2. When baking soda meets vinegar, many of these rise up and make a foam.
3. Fire needs me. I am a gas in the air. My symbol is O.

2 COOL FACT: SIGNS OF A REACTION

In a chemical **reaction**, substances change into new substances. Signs of a reaction are a change of **colour**, a new smell, **bubbles**, **heat** or **light**. When you mix baking soda and vinegar, you see bubbles of carbon dioxide gas. When wood burns, it reacts with **oxygen** and gives out heat and light. After a reaction, it is usually very difficult to change the new substances back into the old ones.

substances = kinds of material

smell = what you notice with your nose

carbon dioxide = a gas in the air that we breathe out

burns = is on fire

S	D	G	O	Q	T	E	L	N	E	O	U
D	N	S	N	A	E	N	E	O	M	T	R

WORD BANK

- ☐ **reaction**
- ☐ **bubbles**
- ☐ **oxygen**
- ☐ **vinegar**
- ☐ **burn**
- ☐ **heat**
- ☐ **colour**
- ☐ **smell**

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. What is a chemical reaction?
2. What do you see when baking soda meets vinegar?
3. What does a fire need?
