Chemistry Word Lab: Mixtures and solutions

Level B1 · about 25 minutes · when substances mix together

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. I have two or more substances together, but they are not joined by a chemical reaction. A fruit salad is an example of me. ☐☐☐☐☐☐☐
2. Salt and water make me. You cannot see the salt, but you can taste it. ☐☐☐☐☐☐☐☐
3. When sugar goes into hot tea and seems to disappear, it does this. ☐☐☐☐☐☐☐☐

2 COOL FACT: SALT AND WATER

A **mixture** has two or more substances that are not joined together chemically. You can often **separate** the parts again. Sand and water make a mixture. Salt and water make a special mixture called a **solution**. When salt **dissolves** in water, it seems to disappear, but it is still there. The salt is the **solute** and the water is the **solvent**. You can taste the salt in the water.

chemically = with a chemical reaction
separate = to take apart
solute = the substance that dissolves
solvent = the liquid that dissolves the solute
