LITTLE WONDERS ESL · ANSWER KEY

Chemistry Word Lab: Separating mixtures

Level B1 · about 25 minutes · filter, evaporate and more

1 BRAIN TEASERS: ANSWERS

1. FILTER. A filter keeps solids back.
2. MAGNET. A magnet attracts iron and steel.
3. EVAPORATE. The water evaporates and the salt stays behind.

2 TEACHER NOTE

Match each method to its mixture: filter for solid and liquid, evaporation for dissolved salt, magnet for iron. Safety: an adult should do any heating.

3 WORD HUNT: SOLVED

12 columns, 8 rows

M	T	R	A	C	E	S	R	L	D	S	I
I	T	M	A	G	N	E	T	W	I	E	I
X	F	L	F	S	A	L	T	S	S	P	X
T	H	O	I	R	O	N	M	W	H	A	L
U	T	E	L	C	L	P	U	C	A	R	I
R	B	R	T	O	W	I	F	L	O	A	E
E	S	A	E	V	A	P	O	R	A	T	E
W	S	B	R	M	E	K	T	H	A	E	R

- **FILTER: down, row 3, column 4**
- **MAGNET: across, row 2, column 3**
- **EVAPORATE: across, row 7, column 4**
- **MIXTURE: down, row 1, column 1**
- **SEPARATE: down, row 1, column 11**
- **IRON: across, row 4, column 4**
- **SALT: across, row 3, column 5**
- **DISH: down, row 1, column 10**

4 SPEAK: SAMPLE ANSWERS

Accept any correct answer in the child's own words

1. How can you separate sand from water?
I can use a filter to separate sand from water.

2. What happens to salt water when we heat it?
The water evaporates and the salt stays in the dish.

3. What can a magnet pull out of a mixture?
A magnet can pull iron out of a mixture.
