LITTLE WONDERS ESL

Chemistry Word Lab: Separating mixtures

Level B1 · about 25 minutes · filter, evaporate and more

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. I am paper or cloth with tiny holes. I keep solids and let liquid go through. A coffee machine uses me.
2. I can pull iron and steel towards me. Many fridge doors have one of me.
3. When you heat salt water, the water does this and turns into a gas. The salt stays in the dish.

2 COOL FACT: FOUR WAYS TO SEPARATE A MIXTURE

We can separate mixtures with simple methods. **Filtering** separates a solid from a liquid. For example, a coffee filter keeps the coffee grounds and lets the liquid through. Evaporation helps when something is **dissolved**. If you heat salt water, the water **evaporates** and the salt stays in the dish. A **magnet** can pull **iron** out of a mixture. **Distillation** collects pure water: the water boils, and then the steam is cooled.

grounds = the small bits of coffee that stay in the filter

pure = with nothing else mixed in

dissolved = mixed completely into a liquid

distillation = boiling a liquid and cooling the steam

3 WORD HUNT

Across or down

M	T	R	A	C	E	S	R	L	D	S	I
I	T	M	A	G	N	E	T	W	I	E	I
X	F	L	F	S	A	L	T	S	S	P	X
T	H	O	I	R	O	N	M	W	H	A	L
U	T	E	L	C	L	P	U	C	A	R	I
R	B	R	T	O	W	I	F	L	O	A	E
E	S	A	E	V	A	P	O	R	A	T	E
W	S	B	R	M	E	K	T	H	A	E	R

WORD BANK

- ☐ **filter**
- ☐ **magnet**
- ☐ **evaporate**
- ☐ **mixture**
- ☐ **separate**
- ☐ **iron**
- ☐ **salt**
- ☐ **dish**

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. How can you separate sand from water?
2. What happens to salt water when we heat it?
3. What can a magnet pull out of a mixture?
