LITTLE WONDERS ESL

Geography Word Lab: The water cycle

Level A2 · about 25 minutes · how water travels around Earth

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. When the Sun heats water, it does this and turns into water vapour.
2. When water vapour cools and turns back into drops of liquid water, it does this.
3. I am made of millions of tiny drops of water. I float in the sky and I can bring rain.

2 COOL FACT: WATER GOES ROUND AND ROUND

The **water cycle** is the way that water moves around Earth. The Sun heats the water in oceans, rivers and lakes, and some of it **evaporates** into water **vapour**, which is a gas. As the vapour rises, it cools and **condenses** into tiny drops. These drops form **clouds**. When the drops become big and heavy, they fall as **rain**, hail or snow. The water flows into streams and rivers, and then back to the ocean. Then the cycle starts again.

vapour = water as a gas in the air

hail = small balls of ice that fall from clouds

rises = goes up

cycle = something that happens again and again

E	O	F	E	O	C	Y	U	R	D	S	W
R	A	I	N	R	D	I	O	E	C	E	O

WORD BANK

- ☐ evaporate
- ☐ condense
- ☐ cloud
- ☐ vapour
- ☐ rain
- ☐ snow
- ☐ river
- ☐ ocean

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. What does the Sun do to the water in the ocean?
2. How do clouds form?
3. What happens to the rain after it falls?
