LITTLE WONDERS ESL

Science Word Lab: Magnets

Level A2 · about 25 minutes · push, pull and the compass

1 BRAIN TEASERS

Read the clue. Write the English word in the boxes.

1. I can pull some metals, such as iron, towards me. I have two poles. ☐☐☐☐☐☐
2. My needle always points north. Travellers use me to find the way. ☐☐☐☐☐☐☐
3. When two north poles come close, they do this and push away from each other. ☐☐☐☐☐

2 COOL FACT: NORTH AND SOUTH

A **magnet** pulls some metals, such as iron, nickel and cobalt. Every magnet has two **poles**, a north pole and a south pole. Different poles **attract** each other, but the same poles **repel** each other. A magnet has an invisible **magnetic field** around it. Earth also acts like a giant magnet. This is why the needle of a **compass** points north. Most metals, such as aluminium and copper, are not magnetic.

invisible = you cannot see it

giant = very, very big

needle = the thin part that points

magnetic = able to be pulled by a magnet

3 WORD HUNT

Across or down

W	A	D	L	I	R	O	N	B	E	I	I
N	T	L	E	F	I	E	L	D	E	P	I
O	T	M	H	P	A	Y	O	W	L	O	R

Y	E	T	N	A	T	E	V	H	R	N	T

WORD BANK

- ☐ **magnet**
- ☐ **compass**
- ☐ **repel**
- ☐ **pole**
- ☐ **attract**
- ☐ **iron**
- ☐ **field**
- ☐ **north**

4 SPEAK

Tell your teacher in your own words (about 1 minute)

1. What does a magnet pull?
2. What happens when two north poles meet?
3. Why does a compass point north?
